

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: The Edgers

Project / Product Name: ClawSight

Organization / Institution (if any): R V College of Engineering

Submission Date: 8th May, 2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming : Yes

Code generation or assistance: Yes

UI / UX design: Yes

Content creation: No

Data analysis: No

Testing / debugging: Yes

Other _____

4. Feature Origin Classification (Please add/delete based on the number of the feature)

Feature 1: The Contextual "Sight" Pipeline (MediaStore & Notifications)

1. **Feature Name:** Omnichannel Context Ingestion.
2. **Self-Generated/AI-Generated/Both:** Both.
3. **Description: AI Tools Used:** Gemini (Android Studio).
 - **Prompt Used:** "I need to update my ClawSightService.kt Foreground Service. I already have the ContentObserver... I need you to add a new function called sendToLocalLLM using OkHttp3."

- **Output Summary:** The AI provided the boilerplate for the NotificationListenerService and the ContentObserver logic to ensure background persistence.
- **Modification:** Manually added a waitForImageReady loop and content-hash de-duplication to ensure the app doesn't process the same message twice or read empty files.

Feature 2: The Privacy Shield (PII Redaction)

1. **Feature Name:** PII Redactor (Regex-based Privacy Layer).
2. **Self-Generated/AI-Generated/Both:** Both.
3. **Description: AI Tools Used:** Gemini (Android Studio).
 - **Prompt Used:** "Rewrite the PiiRedactor class to use this exact Regex logic... 10-digit numbers, 12-digit numbers, and Email addresses."
 - **Output Summary:** Generated the primary Regex patterns for identifying sensitive 10/12-digit sequences and email formats.
 - **Modification:** Refined the Regex patterns to ensure they don't trigger on simple version numbers or small dates, ensuring a "Hard Gate" before data reaches the LLM.

Feature 3: The Action Router & Knowledge Memory

1. **Feature Name:** Autonomous Action & Room Database Integration.
2. **Self-Generated/AI-Generated/Both:** Both.
3. **Description: AI Tools Used:** Gemini (Android Studio).
 - **Prompt Used:** "Generate the code for a basic Room Database... and write an ActionRouter.kt object to fire Intents to Calendar and Google Tasks."
 - **Output Summary:** Provided the Room Database schema (KnowledgeEntry) and the structure for Intent-based routing to the Calendar and Alarm apps.
 - **Modification:** Manually implemented the logic to parse the LLM's JSON output and map it specifically to Android's AlarmClock.ACTION_SET_ALARM with the AI's extracted time.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: M V Amarnath

Role: Student

Signature: M V Amarnath

Date: 8th May, 2026
